

Sealed package: guide

Demonstration package. Synthetic data. Not evidence.

Start here.

01_RECORD holds the controlled incident record (Demonstration_Controlled_Incident_Record.pdf) and the narrative.

02_VISUAL_REFERENCES holds the visual reference register. Nothing was selected for review.

03_EVIDENCE holds the sealed evidence manifest, each original in ORIGINALS, and each original's authenticity certificate in CERTIFICATES.

04_INTEGRITY holds the package authenticity certificate, and in MACHINE_READABLE the signed manifest and the signed artifact index.

05_AUDIT holds the access chronology for this handoff.

06_COMMUNICATIONS holds the property's radio log for 30 minutes either side of the incident.

HOW THIS PACKAGE IS SEALED

This package carries one seal. The recipient, and the prosecutor, defense and court the case brings in, can check it without asking the issuer.

First, SHA-256: 04_INTEGRITY/MACHINE_READABLE/artifact-index.json lists every file in this package with its size and SHA-256. Recompute any file's SHA-256 and compare.

Then, the signature: the artifact index and the manifest are each signed with Ed25519 under key FT-DEMO-2026-10-V3. The certificate in 04_INTEGRITY prints the key's fingerprint. Check the signatures with the key published at <https://fusiontrace.io/verify/demo/signing-keys.json>, after checking that address with a source outside this package.

To check it in full: the FusionTrace Evidence Standard, Part C. The cover sheet prints the record seal and the addresses of the verification page and the published keys.
